## HIGH-VOLTAGE, HIGH-CURRENT DARLINGTON ARRAYS

### ABSOLUTE MAXIMUM RATINGS

Output Voltage, $V_{CE}$	
(ULN200X*, ULN201XA) .....	50 V
(ULN202X*) .....	95 V
Input Voltage, $V_{IN}$	
(ULN20X2, X3, X4) .....	30 V
(ULN20X5*) .....	15 V
Continuous Output Current, $I_C$	
(ULN200X*, ULN202X*) .....	500 mA
(ULN201XA) .....	600 mA
Continuous Input Current, $I_{IN}$ .....	25 mA
Power Dissipation, $P_D$	
(one Darlington pair) .....	1.0 W
(total package) .....	See Graph
Operating Temperature	
Range, $T_A$ .....	-20°C to +85°C
Storage Temperature	
Range, $T_S$ .....	-55°C to +150°C

Note that the ULN2000A series (dual in-line package) and ULN2000L series (small-outline IC package) are electrically identical and share a common pin number assignment

Ideally suited for interfacing between low-level logic circuitry and multiple peripheral power loads, the Series ULN2000A/L high-voltage, high-current Darlington arrays feature continuous load current ratings to 600 mA for each of the seven drivers. At an appropriate duty cycle depending on ambient temperature and number of drivers turned ON simultaneously, typical power loads totaling over 260 W (400 mA x 7, 95 V) can be controlled. Typical loads include relays, solenoids, stepping motors, multiplexed LED and incandescent displays, and heaters. All devices feature open collector outputs with integral clamp diodes.

The Series ULN20x1A/L devices are general-purpose arrays which may be used with external input current limiting, or with most PMOS or CMOS logic directly.

The Series ULN20x2A/L is intended for use with 14 to 25 V PMOS logic. Each input has a series Zener diode and current limiting resistor. The Zener diode also provides excellent noise immunity for these devices.

The Series ULN20x3A/L has series input resistors selected for operation directly with 5 V TTL or CMOS. These devices will handle numerous interface needs — particularly those beyond the capabilities of standard logic buffers.

The Series ULN20x4A/L features series input resistors for operation directly from 6 to 15 V CMOS or PMOS logic outputs.

The Series ULN20x5A/L is designed for use with standard and Schottky TTL where higher output currents are required and loading of the logic output is not a concern. These devices will sink a minimum of 350 mA when driven from a TTL "totem pole" logic output.

The Series ULN200xA/L is the standard Darlington array. The outputs are capable of sinking 500 mA and will withstand at least 50 V in the OFF state. Outputs may be paralleled for higher load current capability. The Series ULN201xA devices are similar except that they will sink 600 mA. The Series ULN202xA/L will withstand 95 V in the OFF state.

These Darlington arrays are furnished in 16-pin dual in-line plastic packages (suffix A) and 16-lead surface-mountable SOICs (suffix L). All devices are pinned with outputs opposite inputs to facilitate ease of circuit board layout.

### FEATURES

- TTL, DTL, MOS, or CMOS Compatible Inputs
- Output Current to 600 mA
- Output Voltage to 95 V
- Transient-Protected Outputs
- Dual In-Line Plastic Package or Small-Outline IC Package

x = digit to identify specific device. Characteristic shown applies to family of devices with remaining digits as shown.

1. Leads 1, 8, 9, and 16 may be half-leads at vendor's option.

In the construction of the components described, the full intent of the specification will be met. The Sprague Electric Company, however, reserves the right to make, from time to time, such departures from the detail specifications as may be required to permit improvements in the design of its products. Components made under military approvals will be in accordance with the approval requirements.

The information included herein is believed to be accurate and reliable. However, the Sprague Electric Company assumes no responsibility for its use; nor for any infringements of patents or other rights of third parties which may result from its use.

- A. Dimensions shown as \_\_\_\_ / \_\_\_\_ are Min./Max.
- B. Lead thickness is measured at seating plane or below.
- C. Lead spacing tolerance is non-cumulative.
- D. Exact body and lead configuration at vendor's option within limits shown.
- E. Lead gauge plane is 0.030" (7.62 mm) max. below seating plane.
